- 401k Plan
- Cafeteria Plan Available

Pre-employment and consent to random drug testing required!

Equal Opportunity Employer

WHAT IS APPRENTICESHIP?

Apprenticeship is a form of education that incorporates workplace training with technical in the classroom or online education. For over 30 years, IEC Central OH, AEC-IEC, has conducted apprenticeship training under standards approved by the U.S. Department of Labor, turning out the very finest of electricians into the Central Ohio workforce and beyond. Many of our graduates now serve the trade and community as electrical contractors giving back to their

trade by employing and helping to oversee the education of apprentices now in training. In 2015, IEC Central OH partnered with IEC Northern OH (NOECA) to provide apprenticeship in that area. *Apprenticeship is a Learn while you earn program.*

What Makes the IEC Electrical Apprenticeship Program So Successful?

1. IEC's four-year program curriculum is recognized by the U.S. Department of Labor, Office of Apprenticeship Training.
2. Recognized and authorized to train by Veteran's Administration. Veterans may recoup training funds while participating in apprenticeship.
3. Recognized by employers throughout the United States as top of the line, with over 12,000 apprentices participating annually.
4. The American Council on Education (ACE) established, through an intensive review process, that the IEC apprenticeship program for electrical construction workers provides college level instruction. Apprentices earn College Credits, specifically applied. Columbus State Community College (CSCC), in partnership with IEC in Central and Northern OH awards over 30 college credits to apprentices who successfully complete the IEC program.... **at NO cost over tuition.**
5. Dedicated professional instructors and staff assist in moving apprentices through the program.
6. Apprenticeship consists of a **minimum** of 144 hours of classroom training per year with lectures, demonstrations, labs and homework, with a comprehensive final exam that must be passed prior to advancing to the next level.
7. Apprentices complete a **minimum** of 8,000 hours on-the-job training over the course of their program, overseen by IEC.
8. With a growth rate in excess of 20% per year, IEC's apprenticeship program is rapidly becoming recognized as the premier electrical apprenticeship program in the industry. Through this combination of education, training, and hands-on experience, students not only learn an understanding of theory, operation, and code. They also learn to develop management and leadership skills.

IEC Central Ohio, Electrical Apprenticeship, offers an exciting and unique training experience to help you gain lifelong trade skills, give you a competitive advantage in the job market and build self-confidence. We provide quality education services, job opportunities with local member contractors and opportunities to secure your future in the electrical industry.

Earn respectable wages while you learn the skills of an electrician. IEC Electrical Apprenticeship uses on-the-job training (OJT) and classroom instruction to move students from helper status to certified electrician within 4 years. All IEC Apprenticeship Programs are certified by the US Department of Labor's Office of Apprenticeship and Training, this means students receive nationally recognized credentials as a Journeyman Electrician.

IEC Apprenticeship Program offers job referral services with local electrical member contractors. During the program, apprentices receive well-balanced thorough classroom instruction. Some of the topics covered include residential, commercial and industrial wiring, blueprint reading, applied mathematics, electrical theory and design, motor controls, fiber optics installation and operation, fire alarm installation, programmable logic and many other electrical topics. In addition to classroom training, you may conduct electrical experiments in the lab where apprentices test the electrical theories discussed in class.

Consider These Facts about IEC and Becoming an Electrician.

Most Apprenticeship Program participants will increase their earnings substantially in just 4 years. Pay reviews are a requirement of a USDL certified apprentice program. AEC-IEC Apprentice Program is certified and apprentice pay is reviewed at certain intervals throughout apprenticeship to assure individual rates meet requirements.

87% of all electrical contractors are independent businesses, operating under the "merit shop" philosophy.

Only government certified programs like IEC Apprenticeship Programs offers nationally recognized certification as a Journey person.

If you move from the area, you may transfer to over 50 IEC programs throughout the United States.

Once you successfully complete your apprenticeship and become an electrician, you will find many areas into which you may choose to advance, including estimating, foreman, project management, sales, consulting and even owning your own business.

Many IEC Graduates progress over time to owning their own Electrical Contracting Companies!

Be a person who recognizes the value of building tangible lifelong work skills and great earning potential. The United States currently has a shortage of skilled electrical workers, which means job security and great earning potential for you as we move further into the 21st century. Invest the time and effort it takes to become a certified electrician today and reap the dividends for the rest of your life.
